Digital Twins in Intralogistics

Decision-making through what-if-scenarios

Our purpose: support customers in Intralogistics in capturing the full benefit of Siemens Digital Industry's automation & digitalization offering

To support OEMs in MHE making use of our technology in the entire value chain ...

... to enable Operators of Automated Warehouses to capture the maximum benefits during the whole life cycle

As **technology partner**, we provide the most comprehensive portfolio to enable the **digital transformation in Intralogistics** – for OEMs in material handling equipment up to customers operating automated warehouses.

We enable our customers to **capture the benefits from Digitalization** along the **entire value chain** and the **whole life cycle** of the installation.

Through the seamless **integration of real and virtual world**, we support **increasing flexibility and productivity** of the assets and thereby **reducing cost and energy consumption**. We make real what matters in Intralogistics!

Digital Enterprise in Intralogistics

Connecting the virtual and real world today, for continuous optimization

Boost productivity in machine and workplace development by **collaborative multi-domain engineering processes**

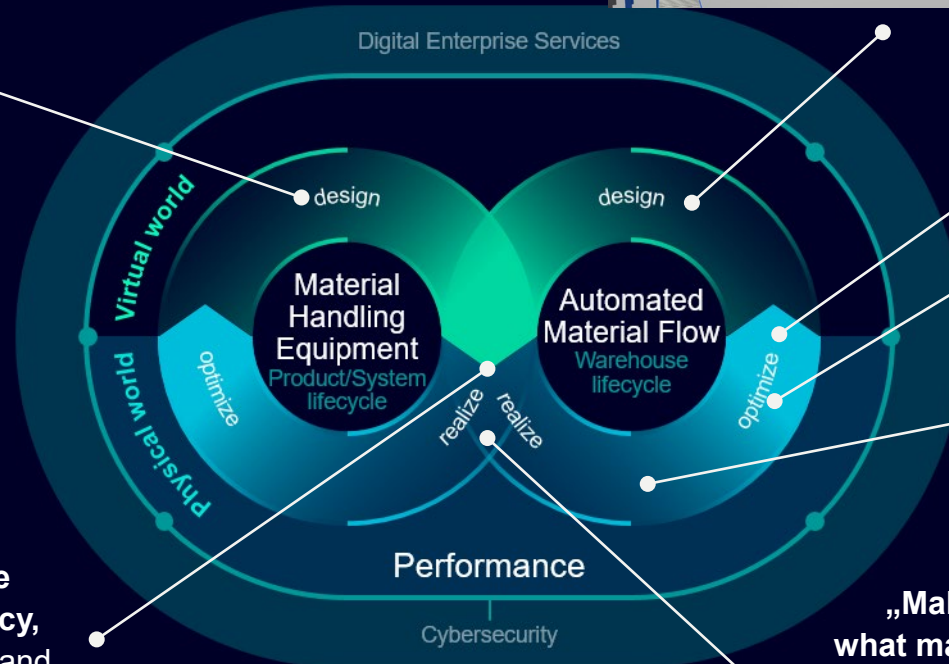

Shorten development time for **optimized material flow**

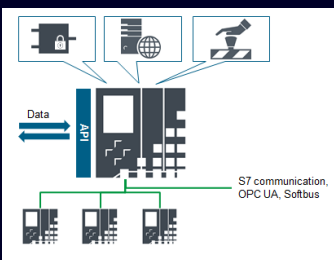

Maintain and optimize operations: **Cloud / IoT based applications portfolio** (Siemens or 3rd party built Apps)

Classical and digital industrial services incl. consulting offerings

Provide efficient and reliable power management

Improve efficiency, quality and enhance flexibility by virtual commissioning

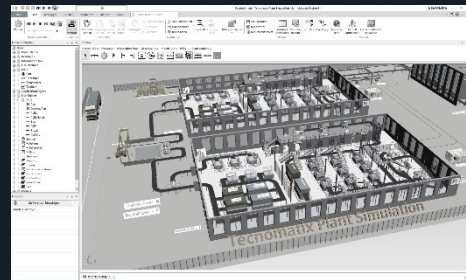

„Make real what matters“ in operations execution for core applications by **DI's entire TIA Portfolio**

Miebach Digital Simulation Models and Intralogistics Digital Twins

Simulation Models

- Virtual representations of physical objects
- Static data
- Expert use

➤ **ADAPTABILITY!**

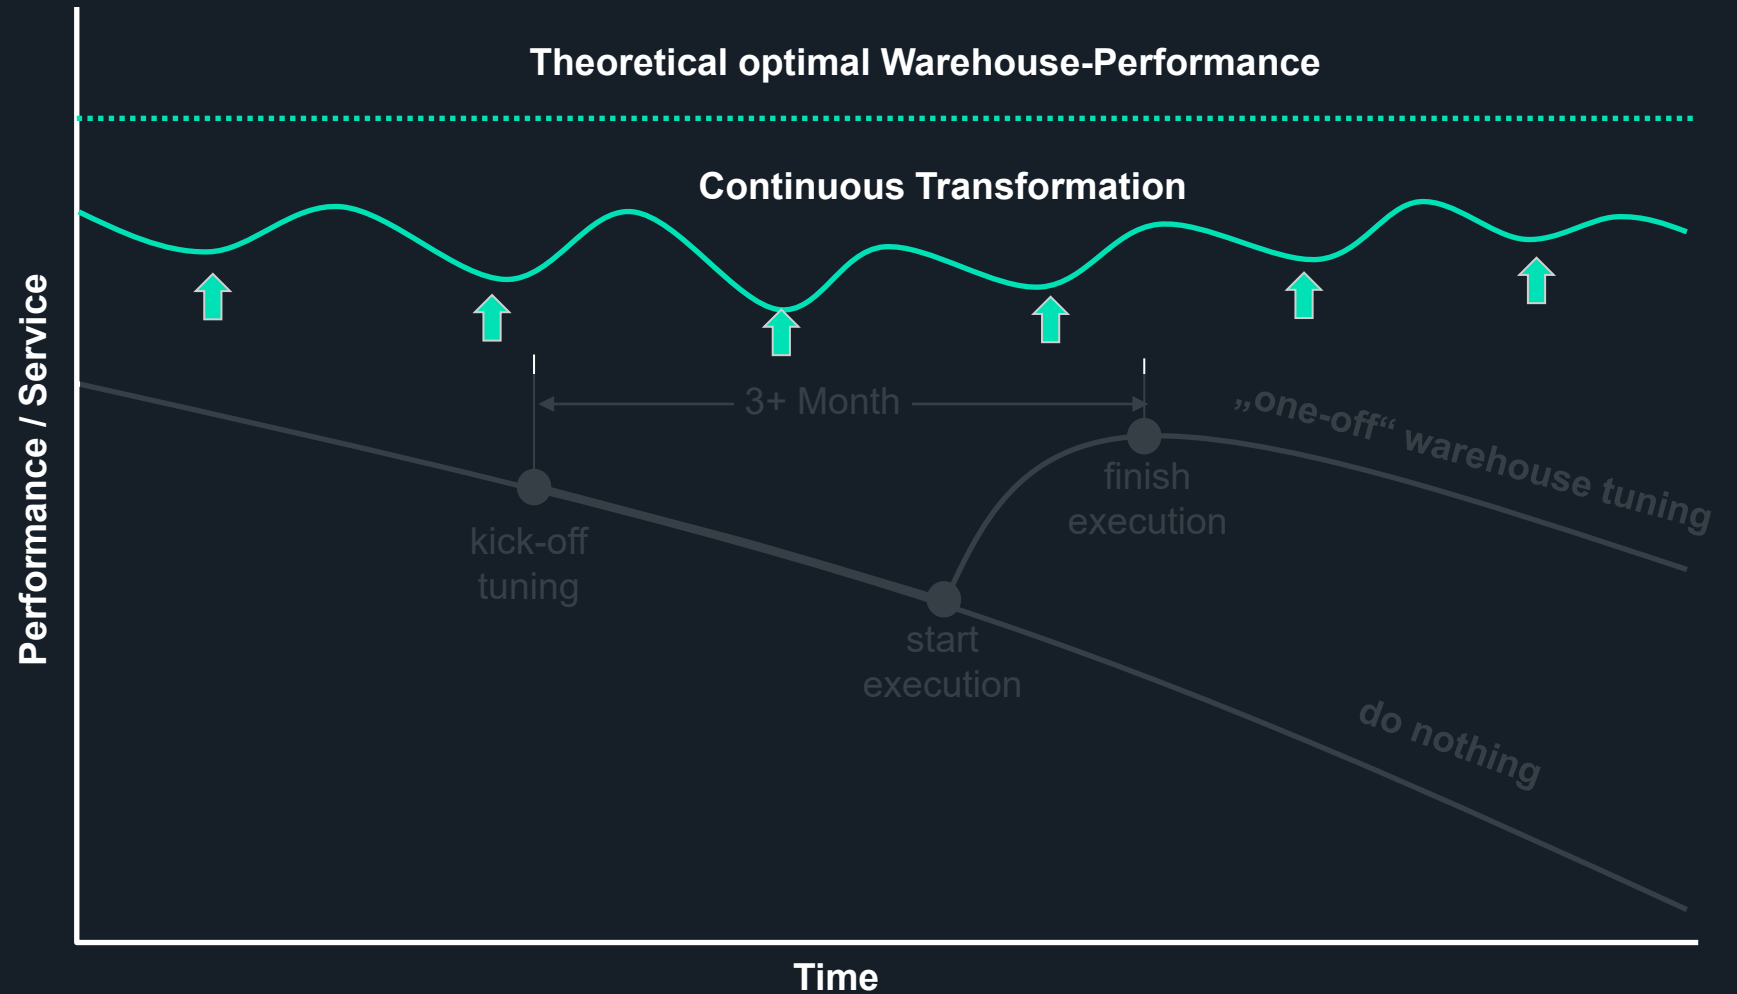

Digital Twin in action!

Smart Solution: Bottlenecks were detected, and effective counter-measures tested and implemented

Digital Twin application has led to higher adaptability

Plan the right measures in Intralogistics: Identifying technology potentials by means of a Digital Twin

Digital Twin of the Material Flow

Use cases and benefits

- Feasibility of storage and material handling equipment concepts
- Optimization and verification of throughput scenarios
- Check against virtual PLCs or WMS software
- Verify and solve bottlenecks, optimize resource utilization (e.g. human workers and / or mobile robots)
- Robustness w.r.t to variable load scenarios and changed orders structures
- Feasibility of warehouse extension / partial technology upgrading
- Optimize energy consumption
- ...
- Simulation model can be used beyond planning as core element of a “Closed Loop Digital Twin” during productive phase

Let's talk Digital Twin

business value?

How to bring the Digital Twin alive: Low-Code integration and calibration with Mendix

Material Flow Simulation

- Simulations of upcoming shifts, based on real list of orders, stock information and availability of workstations
- Run multiple Scenarios
- Prediction of energy consumption

SENTRON PAC Power Monitoring Device
via SIMATIC Energy Suite

Mendix User Interface

- Low-Code application, easy to extend, also for non-programmers
- Easy access for shift-leads, IT, maintenance crew and management
- Can trigger multiple simulation runs and recommend the optimal worker configuration
- User can define the main optimization goal: performance, fulfillment rate or energy consumption

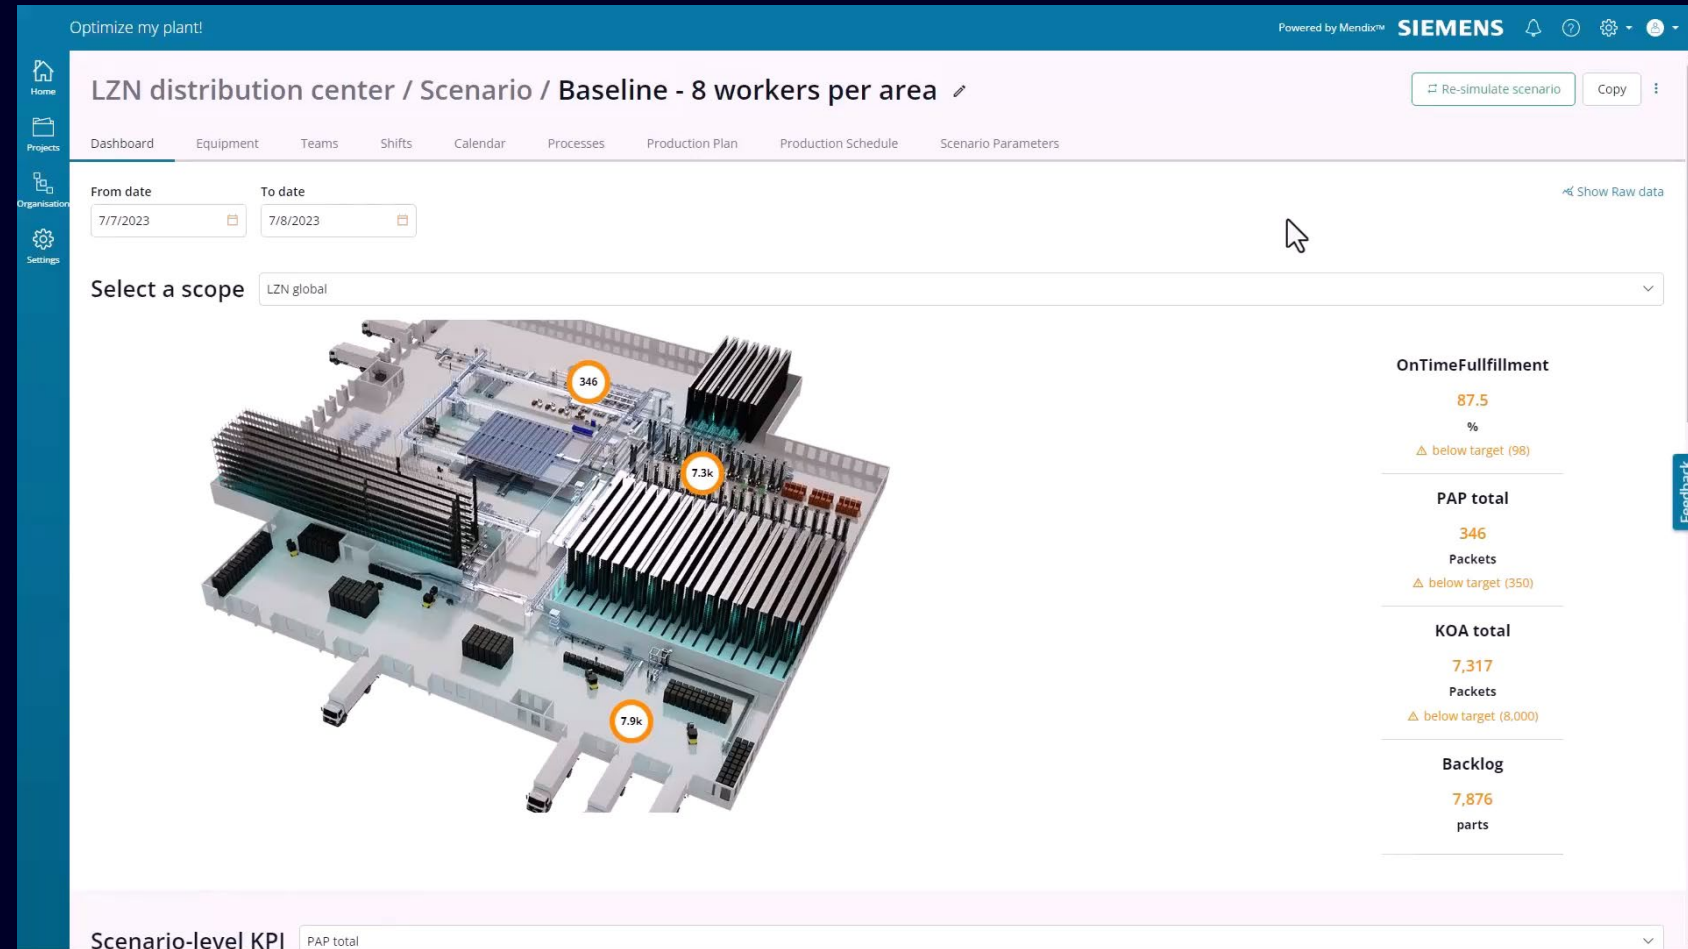

Real Warehouse Management System

- Shift planning information
- Order lists and stock information
- Order execution times

Close the loop with the Digital Twin to enable continuous integration

“Closed Loop” Digital Twin integration

- Automatically update the model with real information from the warehouse, needed for long-term use of the model
- Required every time a process changes or order structures are changing
- Keep accuracy of simulated outcome as high as possible
- Run multiple Scenarios
- Find optimal configuration of workers and workstations
- Compare user-defined worker configuration with simulated alternatives
- Identify operating mode with reduced energy consumption

*Let's talk

buzzword...

Twin Story

You want to see a Digital Twin
in action?
We'll share some insights...

Technology

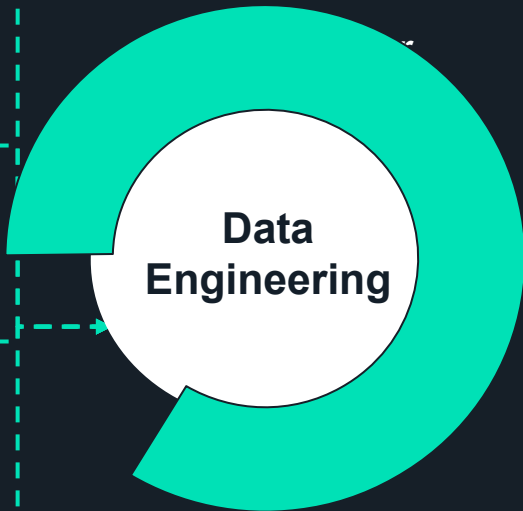

What is the cutting-edge
technology to materialize
business value?

Success Factors / Enabler

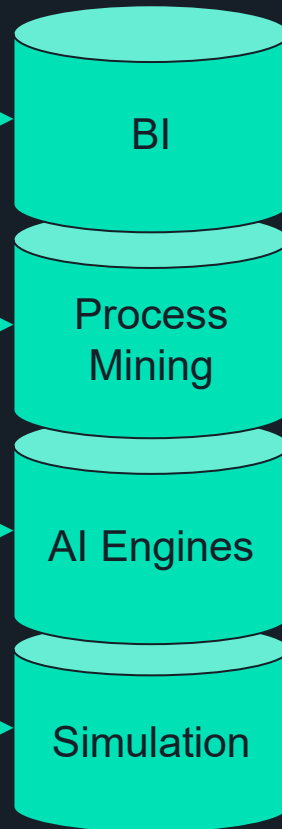

A Digital Twin can be plug-and-play, if... you consider some important principles

A stable data-pipeline enables a high-frequent use of digital twin applications and hence a higher frequency in decision-making

System Landscape

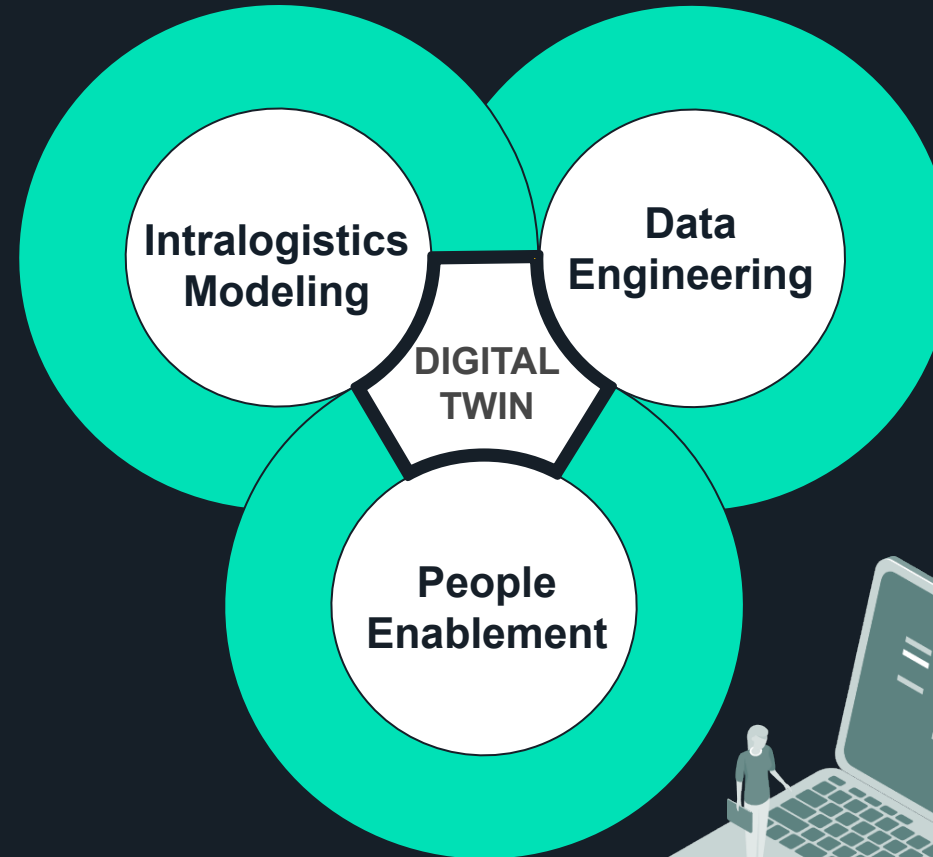

Digital Twin and Analytics

Simulation model

Needed capabilities to run a Digital Twin application
